

**Water Quality Control Management of Water
Treatment Plant. (Case Study Ramadi Water
Treatment Plant)**

By

Mohammed Olaiwi Sulaiman

Supervisor

Assoc. Prof. Dr. Karim M. Aljebori

Asst. Prof. Dr. Ghaida Abu Rumman

*This thesis was submitted in partial fulfillment of the requirements for
master's degree of engineering project management*

**Isra University
Faculty of Engineering**

May, 2017

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

وَجَعَلْنَا مِنَ الْمَاءِ كُلَّ شَيْءٍ حَيٍّ

صِدْقَ اللَّهِ الْعَظِيمِ

Dedication

I dedicate this thesis to my father and mother

my lovely wife,

my daughters and son,

and to my brothers and sisters,

To all my friends especially Mustaffa Al Fahdawi &

Ali Raid

*To all the persons who contributed much in the success of this
dissertation.*

*In addition, I would like to thank Hashemite Kingdom of
Jordan and people for their helped and hosted me throughout the
duration of my research.*

Acknowledgement

I would like to express my deepest respect and sincere appreciation to my family for its kindness and encouragement throughout my undergraduate and graduate study.

*Moreover, Special thanks and deep gratitude to my supervisor, **Assoc. Prof. Dr. Karim Aljebori** and **Asst. Prof. Dr. Ghaida Abu Rumman**, for their valuable guidance, constant support, and understanding throughout the present work, encouragement, suggestions, and utmost effort and interest that contributed to completion of this work.*

*Also, special thanks are due to the staff of the Faculty of Engineering at Isra University especially **Dr. Ibrahim A. Mohammed** for their continual support throughout my research.*

Lastly, I wish to express my thanks to all my colleagues for their support and giving me the feeling of being part of a team whenever we worked together.

Table of Contents

<i>Item</i>	<i>Title</i>	<i>Page</i>
-------------	--------------	-------------

Chapter One: Introduction

1.1	General	1
1.2	Quality assurance and control	2
1.3	Water Resources	6
1.4	Water quality parameters	8
1.5	Study area	13
1.6	Objectives	15
1.7	Hypotheses	15
1.8	Research methodology	15
1.9	The Structure of the proposed thesis	16

Chapter Two: Literature Review

2.1	Introduction	17
2.2	Standards	18
2.3	Description of the main water-quality variables	23
2.4	Quality control related to water treatment	40
2.5	Previous studies	42

Chapter Three: Data Collection and Methods

3.1	Euphrates River within Ramadi city	47
3.2	River Flow data	51
3.3	Water quality data	55
3.4	Description of Ramadi water treatment plant	58
3.5	Control Charts	64

Chapter Four: Results and Discussion

4.1	Introduction	68
4.2	Data analyses	68
4.3	Mean control charts of water parameters	79
4.4	Suggested units according to the control charts study	89

Chapter Five: Conclusions and Recommendations

5.1	Conclusions	93
5.2	Recommendations	94

Abstract

In this study, quality control study of water treatment plant was investigated. Ramadi water treatment plant was chosen as a case study, this plant is located in Anbar Governorate of Iraq. Water quality control charts were developed according to the monthly data gathered in 2013 for the raw and treated water. The major purpose of this study is to develop a baseline data regarding to water quality condition and therefore, the proper management and improvement of drinking water produced from Ramadi plant. Control charts model is applied for the first time in the analysis of water quality in the case study plant. These charts can provide a clear pictorial view about the water quality parameters status of the Ramadi plant as well as Euphrates River.

Data of several water quality parameters were used in the assessment study such as temperature ($^{\circ}\text{C}$), pH, turbidity (NTU), total dissolved solids (TSS, mg/L), Electrical Conductivity (EC, $\mu\text{S}/\text{cm}$), total dissolved solids (TDS, mg/L), hardness (mg/L as CaCO_3), and alkalinity (mg/L as CaCO_3). In addition, the present stages of treating water in Ramadi plant were discussed. This is will be helpful to find out which units can be modified or suggested for the improvement the specification of drinking water.

The water quality data were first compared with the Iraqi standards of drinking water and the results showed that approximately all the parameters within the acceptable limits except of EC and TDS in which some values were exceed the allowable limit. Despite that, control charts study revealed that the mean values of some parameters were crossed the upper and lower control limits indicating poor drinking water quality. TDS was the most parameter that crossed the control limits in many cases. These findings suggested to

install several new TDS treatment units in the Ramadi water treatment plant. The main units are Reverse Osmosis units and using dual media filters instead of sand filter. Additional optional units also were mentioned to treat the hardness and pH values. This study can be helpful to assess the drinking water in other water treatment plants.
