**Formulation of Injectable Controlled Release Valproic Acid in Castor
Oil Base**

**By
Rawand Mohammed Salah Doghmosh**

Aug, 2018

Valproic acid (VA) is a known Antiepileptic medication, is given orally in a form of solutions or tablets and intravenously. Due to, oscillations of its plasma levels from these dosage forms, the serious adverse side effects on various systems especially liver toxicity and liver damage, and the unpleasant bitter taste of the oral solutions, there is a need to formulate VA in a way to minimize plasma oscillation and the unwanted toxic side effects this can be achieved by controlling the release of the drug,

VA was prepared as an intramuscular oil injectable solution, where VA is physically entrapped in castor oil vehicle. This injectable solution was prepared by using an ordinary mixing method, according to the US patent 9833459. By mixing ethyl alcohol, benzyl benzoate, valproic acid, α -tocopherol, polysorbate 80 (tween® 80) and castor oil. A homogenous, pale yellow clear oily injectable solution was obtained. Three formulas with different concentrations of VA were prepared using this method (4 g, 5 g, and 6 g). These injectable solutions were analyzed for clarity, stability at different temperatures at $5^{\circ}\text{C} \pm 3^{\circ}\text{C}$, $25^{\circ}\text{C} \pm 2^{\circ}\text{C}/60\% \text{ RH} \pm 5\% \text{ RH}$, and $40^{\circ}\text{C} \pm 2^{\circ}\text{C}/75\% \text{ RH} \pm 5\% \text{ RH}$ for the three formulas, quantify the drug content, viscosity determination, injectability testing

and characterization of the in vitro release profile for the finished products. The three formulas had shown a great clarity against white back ground and under a strong light, stability at different temperatures $5^{\circ}\text{C} \pm 3^{\circ}\text{C}$, $25^{\circ}\text{C} \pm 2^{\circ}\text{C}/60\% \text{RH} \pm 5\% \text{RH}$, and $40^{\circ}\text{C} \pm 2^{\circ}\text{C}/75\% \text{RH} \pm 5\% \text{RH}$ were checked visually and using HPLC method, they show a great stability under these conditions, drug content for F1 was 107.7%, F2 was 98.4% and F3 was 93%, even the viscosity of the three formulas doesn't change by using different speed rates 25, 50 and 100 rpm, the viscosity for F1 was 20mPa's, for F2 was 35.5mPa's and for F3 was 52mPa's, and the manual injectability testing for F1 performed by 20 different individuals gave a good timing profile approximately 15.73 sec. In addition the in vitro release for the three formulas in buffer solution PH 7.4, showed that the release started after 24hrs and lasts for 16 days and the % release reaches to 99.8% in F1, 99.40% in F2 and 97.8% in F3.

COMMITTEE DECISION

This Thesis/Dissertation (Formulation of Injectable Controlled Release Valproic Acid in Castor Oil Base) was successfully Defended and Approved on

Examination Committee Signature

Dr. Samer Hasan Hussein-Al-Ali (Supervisor).

Dr. JabarFaraj Al-Wakeel (Co-supervisor).

Dr. Jamal Al- Karad (Internal Member).

Dr. Fatima Ali Tawfiq (External examiner).

Dedication

This thesis is dedicated to:

The sake of Allah, my Creator and my Master,

My great teacher and messenger, Mohammed (May Allah bless

and grant him), who taught us the purpose of life,

My great parents, who never stop giving of themselves in countless

ways,

My dearest husband, who supported me a lot,

My beloved brothers and sisters.

My beloved kids: Rayan, and Jad.

To all my family, the symbol of love and giving,

My friends who encourage and support me particularly, my best friend RawanHijawi

All the people in my life who touch my heart,

I dedicate this research.

ACKNOWLEDGMENT

In the Name of Allah, the Most Merciful and the Most Compassionate.

First and foremost, my acknowledgment and limitless thanks goes to Allah who made this work become truth.

I am sincerely grateful to Dr. Amjad Abu- Rmeleh, the Dean of college of Pharmacy, Isra University, for his support.

I would like to thank Dr. Fatima Ali Tawfiq for accepting being an examiner for my thesis, I really appreciate that.

I would like to thank Dr. Jamal Al- Krad for accepting being an examiner for my thesis, I really appreciate that.

I would like to express my sincere gratitude deepest thanks to my Supervisor Dr. Samer Al-Ali, for his scientific guidance and support. Wishing him continuous progress.

I would like to express my sincere gratitude deepest thanks and appreciation to my Co-Supervisor Dr. JabarFaraj Al-Wakeel, who gave me the project idea, who shows me the right way to take through the whole experiment period, I really appreciate his precious time that he gave to make this work possible and I wouldn't forget the tremendous scientific support for me. He was a professor, a teacher, and a father. I would like to dedicate this work, my words, thanks and my appreciation to him, because without him this would be hard to accomplish.

I would like to take this opportunity to say warm thanks to my beloved friend Dr. RawanHijawi, who have been so supportive along the way of doing my thesis.

I also would like to express my wholehearted thanks to my family for their generous support they provided me throughout my entire life and particularly through the process of pursuing the master degree. Because of their unconditional love and prayers, I have the chance to complete this thesis.

I owe profound gratitude to husband, Zahran, whose constant encouragement, limitless giving and great sacrifice, helped me accomplish my degree.

I would like to thank my inspiration lovely sons Rayan and Jad.

I am also grateful to Dr. Rasha Khaled Abu Thawabeh without her help, this study would not have been possible.

Last but not least, deepest thanks go to all people who took part in making this thesis real.

TABLE OF CONTENTS

ABSTRACT	III
COMMITTEE DECISION.....	V
DEDICATION.....	VI
ACKNOWLEDGMENT	VII
TABLE OF CONTENTS	VIII
LIST OF TABLES	XII
LIST OF FIGURES.....	XIII
LIST OF ABBREVIATIONS OR SYMBOLS.....	XIV
Chapter One: Introduction	1
Aims and Objectives.....	2
Specific Objectives	2
Chapter Two: Literature review.....	4
2.1 Valproic acid (VA):	4
2.1.1 Physical and chemical properties of valproic acid	5
2.1.2 Valproic acid pharmacological effects, pharmacodynamics, and mechanism of action	5
2.1.3 Pharmacokinetics.....	7
2.1.4 The daily dosage regimen for Valproic acid. Adults.....	9
2.2 Controlled drug delivery system (CDDS).....	10
2.2.1 Ideal drug candidate for the controlled delivery system:.....	12

2.3 parenteral drug delivery system:.....	13
2.3.1 Parenteral Controlled drug delivery systems (PCDDS)	13
2.3.2 Examples on controlled release parenteral formulation:	14
2.3.3 Oil Injectable solutions	15
2.3.4 Marketed oil injectable solutions:	17
2.4 Valproic acid available pharmaceutical dosage forms.....	18
2.5 Castor oil (CO)	19
2.5.1 Castor oil derivatives	22
2.5.2 Castor oil uses	23
2.6 Previous studies	24
Chapter three: Methodology.....	27
3.1 Materials and Equipment:	27
3.2 Methods.....	29
3.2.1 HPLC Method development:	29
3.2.2 Mobile phase preparation:.....	30
3.2.3 Preparation of standard solution for calibration curve:	30
3.2.4 Preparation of the formulation:	31
3.2.5 Preparation of buffer solution of PH 7.4 used in in-vitro release studies as a dissolution media:	33
3.3 Characterization for the final product	33
3.3.1 Visual inspection for the final product (checking clarity)	33

3.3.2 Stability studies for the final product visually and by analyzing the samples using the reversed phase HPLC method:.....	43
3.3.3 Assay for the final formulation:	43
3.3.4 Viscosity testing for the final product:	35
3.3.5 Injectability testing:	35
3.3.6 In-vitro release studies.	35
3.3.7 Dialysis cells used for in vitro release studies.....	35
Chapter Four: Results and discussion	38
4.1 Characterization for the final product.	38
4.1.1 Visual inspection for the final product (checking clarity).	38
4.1.2 Stability studies for the final product (visually and by analyzing the samples using the reversed phase HPLC method):	39
4.1.3 Assay for the final formulation.	42
4.1.4 Viscosity testing for the final formulation.	42
4.1.5 Injectability testing.	44
4.1.6 The In-vitro release studies.	47
Chapter Five: Conclusion	53
Future work.....	54
Chapter Six: References.....	55

LIST OF TABLES

Table 1-1: Initial Daily Doses from Valproic acid (Meador, 2013).....	10
Table 1-2: List of vegetable oils used in commercially available parenteral formulations.	16
Table 3-1: List of the materials used in this study.	27
Table 3-2: List of Equipment.	28

LIST OF ABBREVIATIONS OR SYMBOLS

MRDDS	Modified release drug delivery system
C _p	Plasma drug concentration
MEC	Minimum effect concentration
MTC	Minimum toxic drug concentration
VA	Valproic acid
CO	Castor oil
IM	Intramuscular
HDACs	Histone deacetylases
HIV	human immunodeficiency virus
CSF	Cerebrospinal fluid
NA	Not available
DDS	Drug delivery system
PCDDS	Parenteral controlled Drug delivery system
UDP-glucuronosyltransferase	Uridine 5'-diphospho-glucuronosyltransferase
IV	Intravenous
MCT	Medium chain triglycerides
BSS	British Standard Specification
USP	United States Pharmacopoeia
BP	British pharmacopoeia
RA	Ricinoleic acid
PLGA	Poly lactic-co-glycolic acid
GnRH	Gonadotropin-releasing hormone

LIST OF ABBR'EVATIONS OR SYMBOLS

HPLC	High Performance Liquid Chromatography
AUC	Area Under the Curve
KH_2PO_4	potassium di hydrogen phosphate
NaOH	Sodium hydroxide
ICH	International Conference on Harmonization
